The Master of Science programme in Public Policy and Human Development (MPP) is a unique partnership between Maastricht University (UM) and the United Nations University (UNU). Both institutions share the values of diversity, cooperation, good governance, and human development, and the role of education as a key factor contributing to those values.

Through its connections with UNU institutes and UN agencies, our programme has a strong focus on human development, a policy discourse which is substantially shaped by the United Nations Sustainable Development Goals.

Our one-year, full-time double-degree master’s programme is internationally oriented and taught in English. Our student body and academic staff represent more than 40 nationalities.

Public policy is inherently multi-disciplinary. The multi-disciplinary approach is expressed in the design of the curriculum, the student population, and the academic staff. The curriculum focuses primarily on the disciplines of economics, law, international relations, political science and sociology.

The programme offers specialisation tracks in cooperation with UNU institutes, such as ‘Risk & Vulnerability’ with the UNU Environment and Human Security institute (UNU-EHS) in Bonn, and ‘Social Entrepreneurship & Public Policy’ and ‘Governance of Innovation’ with UNU-MERIT in Maastricht.

Specialisation tracks such as ‘Social Protection Policy’, ‘Regional Integration & Multi-Level Governance’, ‘Migration Studies’ and ‘Foreign Policy & Development’, also benefit from the cooperation of high level of expertise that can be found at the various faculties of UM, the UNU, and other educational organisations and think tanks.

We are pleased to offer our students a unique double-degree programme with a truly international character, that will prepare them for successful careers in policy analysis, policy design, policy monitoring and policy evaluation across the globe.

Professor Bartel Van de Walle
Director United Nations University-MERIT
Dean Maastricht Graduate School of Governance
Public policy shapes the lives of individuals across the globe. When designed and structured to achieve the well-being of individuals, public policy contributes to human development.

Public policies are shaped by policy actors. It is their actions that contribute to defining policy problems and the approach to solve them. The effects of policy actors have an impact that often reaches much further than initially intended and beyond the physical borders of nation-states.

Public policy is a process involving many layers of policy actors ranging from international organisations to local administrations. It is no longer the exclusive responsibility of politicians and civil servants.

Semi-private, private and non-governmental parties are becoming increasingly important actors in all stages of complex policy processes, ranging from conceptualisation and design to the implementation and evaluation of policy actions.

The concept of ‘good governance’ refers to efficient and effective policies striving to uphold the rule of law. Experience shows that good governance is not something that can be implemented overnight. The development of a progressive, well-balanced policy requires independent policy actors, who will have benefited from a high-quality training in policy analysis, risk assessment, policy design, policy monitoring, policy evaluation and methods and techniques of policy research. This master's trains students during the autumn semester on quantitative methods (statistics and regression analysis) for that purpose.

The specialisations offered in the master’s programme in Public Policy and Human Development focus on the most relevant topics of public policy: Social Protection Policy; Migration Studies; Risk and Vulnerability; Regional Integration and Multi-level Governance; Governance of Innovation; Foreign Policy and Development; Social Entrepreneurship and Public Policy.
Our Students

We welcome highly motivated individuals who are aiming to use public policy to solve real-life problems and are committed to the Sustainable Development Goals. They may come from various academic and cultural backgrounds and be at different stages of their professional careers. Our students are defined by a solid academic record, a common motivation to acquire the critical quantitative skills for evidence-based policy, a demonstrated commitment to public policy at the national and international level, and an outstanding potential for career growth and leadership.

Every year, we receive about 600 applications from all continents and over 100 countries. This diversity results in a stimulating blend of country-specific knowledge and individual experience where students learn from their teachers and each other.

Throughout the year, our students find multiple opportunities to interact with their instructors and work with researchers based in the institute. The lively, open-minded and stimulating environment help students to soon feel at home.

What to Expect?

• An intensive, inspiring one-year programme
• High-level lecturers and guest speakers
• Workshops, seminars, simulation exercises, presentations and debates
• Training in statistics and regression analysis skills to analyse policies
• Classes in small groups where discussion is encouraged

A Broad Range of Learning Methods

Maastricht University encourages students to play an active role in their education and has long been known for its flexible and innovative use of teaching methods. It was one of the first universities worldwide to adopt the Problem-Based Learning (PBL) system to prepare students for the realities of working life. PBL works by taking students through the discussion, analysis and solution of problems in seven steps.

Besides the PBL system, our master’s programme benefits from contributions from many external experts and guest lecturers. The over 100 instructors and guest speakers in the programme apply a broad range of teaching methods: from PBL tutorials, simulation exercises, case studies and mock trials, to more traditional methods such as lectures and seminars.
“The course schedule was tough. But I frankly never could have imagined that the problem-based learning approach, and the pragmatic programme design skills that I acquired from the programme in 2001- modeling policy options and writing technical memos - would be as relevant and integral to my role as a Social Protection Advisor to the Government of Uganda today.”

David Lambert Tumwesigye, Policy & Advocacy Advisor at Expanding Social Protection Programme (ESPP) - Uganda, MPP 2002

Our Teaching Staff

Just like our students, our teaching staff is characterised by its multidisciplinary and multicultural profile.

Besides lecturers from Maastricht University and guest speakers from various United Nations University institutes and the universities of Bonn, Oxford, Syracuse and Liège, our programme welcomes a wide range of experienced practitioners from policy organisations at international, national and local level.

In recent years, we have benefited from contributions by staff from the International Labour Organization (ILO), the World Bank, the Economic Policy Research Institute (EPRI) in South Africa and many others.

With guest lecturers from international universities and organisations, the programme offers a valuable balance between theoretical and practical approaches and ensures that students receive exposure to relevant and current knowledge.

Guidance and Support

Student guidance and support start with providing prospective students from all over the world with up-to-date information on all aspects of studying at our institute and in Maastricht through our electronic Study Portal learning environment as well as several dedicated social media platforms. Before and during their study, our students can count on support from the faculty and administrative staff of the programme for help in matters of study choices, progress and planning.

Maastricht University’s Student Services Centre provides many additional services, including assistance related to financial and administrative matters, psychological support from fellow students in times of need, and a Career Services unit where students can receive guidance in applying for positions and securing jobs.

The MPP programme includes a non-compulsory Employability Track, aimed to assist students in developing their professional plan for the next step in their career.
As policy issues become more complex, policy actors increasingly need to possess a combination of theoretical background knowledge, core technical skills for policy analysis (e.g. STATA, statistics, regression analysis), as well as a solid understanding of key policy fields.

Our master’s programme aims to provide these skills and knowledge. The Autumn semester is devoted to the study of core subjects and acquisition of core skills, with courses on Public Policy, Public Economics and Public Policy Analysis and on Statistics and Regression Analysis. Students learn how to analyse policy using quantitative research methods and how to undertake independent research. During the Spring semester, they focus on their chosen specialisation and their thesis. The programme concludes at the end of August with a thesis defence.

The academic programme during the Autumn semester is identical for all students and focuses on fundamental knowledge and skills needed by policymakers and analysts regardless of their subject area.

In the Spring semester, students can choose one out of seven areas of specialisation:

- Social Protection Policy (in cooperation with ILO)
- Migration Studies
- Governance of Innovation (in cooperation with UNU-MERIT)
- Regional Integration and Multi-Level Governance
- Risk and Vulnerability (in cooperation with UNU-EHS)
- Foreign Policy and Development
- Social Entrepreneurship and Public Policy (in cooperation with UNU-MERIT)
"My employers were impressed with my knowledge of econometrics and methodologies for public policy analysis. One of my first challenges as a World Bank consultant was to design and implement an exploratory study with primary data collection. For that, the concepts learned in the research design course were fundamental."

Louisee Cruz, Education and Policy Analysis Consultant, World Bank, Brazil, MPP 2017

**Duration**

1 September - 31 August
(12-month full-time study)

**Double Degree**

After successful completion of the programme, students obtain a double Master of Science (MSc) degree in Public Policy and Human Development. Graduates receive two diplomas, one diploma delivered by Maastricht University, and one diploma issued by United Nations University based in Tokyo, Japan. The Maastricht University diploma is accredited by the Accreditation Organisation of the Netherlands and Flanders (NVAO) as well as the European Association for Public Administration Accreditation (EAPAA).

**Programme Objectives**

The programme aims to contribute to human development through the critical analysis and evaluation of public policies.

The programme is defined by its strong emphasis on developing professional skills and on equipping students with substantive knowledge, technical expertise, and competences to enable them to work as policymakers and policy analysts in domestic and international organisations.

**Career Prospects**

Since its launch in 2005, over 1,100 students have successfully graduated from the programme. Many of them have gone on to work as public policy actors at the local or international level. Our alumni are trained policymakers and analysts, who go on to work in public policy and academia or for NGOs and consultancies.

With the skills acquired in the programme and the support provided through the Employability Track, our alumni can identify and review different policy options and implement the adequate policy. In their work, they can integrate legal, social, cultural, political and financial aspects, while ensuring the economic viability and sustainability of their policies. Policy monitoring, evaluation, innovative thinking, strong quantitative skills and critical analysis are logical elements in our alumni toolbox.

Alumni can work throughout the world in public and private institutions of both economically strong and economically unstable countries, including national, regional and local governments, ministries, pension funds, market authorities, NGOs, international organisations and consultancies.
An alumni census conducted in February 2017 among 2014/2015 graduates revealed that 41 per cent of graduates served in an analytical capacity, as advisors, analysts, researchers or consultants, while 38 per cent served in an operational role as a manager, or as a desk officer with responsibility for a case or programme.

A quarter of the graduates worked directly for the public sector, of which 11 per cent worked for international organisations such as OECD, ILO, IOM or EU institutions, and 14 per cent worked for national or sub-national organisations such as the Dutch Ministry of Economic Affairs, the Swedish Migration Agency or the Barcelona City Council.

Twenty-two per cent worked at research-based organisations, most of which formal universities: Leiden, LSE, Maastricht, McGill and Sydney, but also UNU-MERIT and UNU-EHS. The mix of employers aligned well with the expressed goals of the programme, with at least 65 of graduates working for or with the public sector and another 22 per cent working in an analytical capacity.

Autumn Semester

Introduction

The Autumn semester consists of seven courses, divided between three core subject courses and four core skills courses.

The objective for this semester is to cover general aspects of public policy, drawing on several academic disciplines such as political science, sociology, public finance, microeconomics, international relations, public management and public policy.

This semester aims to attain three goals:

1. to bring students up to speed on the basics in public policy and public economics;
2. to learn and practise the core quantitative skills of policy analysis (introduction to data science and regression analysis);
3. to equip students with competencies in research design and methodology needed for academic work and professional careers.

The Autumn semester prepares students for the detailed analysis of issues studied in the upcoming specialisation.

Core Subject: Public Economics

Public economic theory helps to analyse the role of markets and market failures, externalities and corrective taxation, public goods and collective decisions, the pricing and regulation of natural monopolies, commodity and income taxation, capital and corporate taxes.

This course is an introduction to the theoretical foundations of efficiency and effectiveness criteria; net present value analysis and the mechanics and fundamentals of cost-benefit analysis and their common mistakes. The analysis of these topics and their underlying economic theories form the backbone of the course. This analysis serves as the basis for the elaboration of further training in the following course of the semester.

Core Subject: Public Policy Analysis

This course aims to help students develop the skills required to define and critically analyse policy issues, articulate relevant decision-making criteria for policy analysis, evaluate alternative solutions, and assess the means and costs of implementation.

Students focus on actors, institutions and policy instruments to gain a systematic way of thinking about the development, design and assessment of public sector policies. During this course, specific attention is given to policy evaluation and policy simulation through real-life exercises.

Core Subject: Public Policy

A skilled analyst can identify the key actors, their concerns and goals and the power they hold in their specific cultural background. The successful analyst is aware of how institutional structures affect choices and outcomes.

The course is PBL-based, allowing students to play an active role while practising their analytical and team-working skills. Students learn to investigate the relationships between different policy objectives, institutions and structures, and to review and translate their findings into well-defined proposals critically.
Core Skill: Data Science and Statistics

This course aims to teach in an interactive, hands-on manner the basic skills needed in working with and analysing data. The course starts with steps to “clean” data, and to describe its properties using statistics and visualisation. The course then introduces basic forms of inferential statistics and teaches students how to use the Stata statistical package.

The course prepares students for the courses on Regression Analysis and Public Policy Analysis.

Core Skill: Regression Analysis

This course introduces students to the regression analysis model and provides them with tools to work with it. Students learn how to use this model for public policy analysis using real-world data. They are introduced to econometric techniques that can be used on different kinds of data, going beyond the basic regression model.

In particular, students learn to apply which regression model under which circumstances, and how the models can be used for public policy analysis.

Core Skill: Research Design

This course aims to familiarise students with the foundations of evaluating and designing academic research. It is grounded in broader discussions around the philosophy of science to critically assess how we come to know (scientifically) about the world. The course also enables students to evaluate existing research and review academic debates to identify areas where their research can make a relevant contribution. The course then familiarises students with the process of designing their research projects (such as their master’s thesis), discussing the need for a balance between the components of the research question, theory, data, and methods.

The course combines both theoretical knowledge and hands-on application and includes online materials, lectures, PBL sessions and applied methodological workshops.

Thesis Track

One of the requirements for completing the programme is to write a thesis during the academic year. Students define a specific problem and to write a thesis reflecting their knowledge and understanding of that problem. They must conduct their independent research and analysis using generally accepted methods of research design and analysis. The thesis can take the form of survey analysis, empirical investigation, case study or theoretical investigation.

The thesis track is designed to guide students into their research project. It includes the following key features:

• An introduction to the thesis track in October
• A thesis market for students and staff in November
• Tutorials and workshops into quantitative and qualitative methods (or both) in January
• Feedback by staff on a written thesis proposal
• Personal guidance by a thesis supervisor from UNU, UM or an external organisation until completion of the thesis
During the Autumn semester, students choose an area of specialisation from the seven tracks offered in the programme. Each track provides four courses covering one particular theme of public policy. The programme director, assigned mentors and instructors of the specialisations are available to assist students with the selection of their specialisation.

During the Spring semester, students specialise in a particular policy area. The specialisation contributes to the understanding of public policy concerning a topic that contributes to human development.

During the specialisation track, students continue the content and method training, yet narrowed to a particular policy area. This training improves their employability profile because they start building networks and discovering in which field they would like to implement their skills.

The specialisations are:

- Social Protection Policy (in cooperation with ILO)
- Migration Studies
- Governance of Innovation (in cooperation with UNU-MERIT)
- Regional Integration and Multi-Level Governance
- Risk and Vulnerability (in cooperation with UNU-EHS)
- Foreign Policy and Development
- Social Entrepreneurship and Public Policy (in cooperation with UNU-MERIT)
Social Protection Policy

Target 1.3 of the SDGs clearly states that nationally appropriate social protection systems and measures for all, including floors should be implemented and that by 2030 the aim is to achieve substantial coverage of the poor and the vulnerable.

Social protection involves policies and programmes to reduce the incidence and severity of poverty and vulnerability. This can be done by promoting efficient and equitable labour markets, decreasing people's exposure to risks, and developing their capacity to manage economic and social risks, such as exclusion, unemployment, illness, disability and old age. This happens alongside efficient design and management within (and coordination between) social protection institutions, to ensure an optimal and sustainable allocation of public resources.

This specialisation provides an interdisciplinary and in-depth examination of social protection policies, frameworks, systems, interventions and instruments aimed at giving future policy analysts and practitioners a toolbox to tackling the relevant, challenging issues in public policy. It consists of applied courses backed by traditional and emerging theories while incorporating local, regional and international contexts.

Students are exposed to a spectrum of theory and real-life case studies, from micro and macro perspectives. They learn how to identify social challenges from a public policy lens, design, evaluate and analyse a range of intervention and implementation options available to address those challenges. Reinforced by methods and measurement techniques, the specialisation topics include poverty and inequality, social risks and vulnerabilities, the political economy of social protection, policy interventions and instruments, the nature and economics of welfare state models, rights-based approaches, demographic, economic and social challenges, social design and social budgeting.

Migration is a growing phenomenon that has gained importance in the public debate on development, welfare and immigration policy. According to the International Organization for Migration, it is estimated that there are 258 million international migrants worldwide, constituting of slightly more than 3 per cent of the world population (2017).

Remittance transfers (the money that migrants send back to their home countries) to developing countries currently amount to more than US$466 billion (in 2017), surpassing foreign direct investment and official development aid in many countries around the world.

Migration is a controversial topic in the international and national policy arena, and the effects of migration on migrants, their families and communities in the destination and origin countries need to be studied carefully. While mass media often focus on a few spectacularly problematic cases, the courses in this specialisation study the key issues in-depth and with scientific rigour.

This specialisation comprises four courses that introduce students to the essential components of migration studies including trends, theories, causes and effects, data collection and analysis and migration policy. Students will have the opportunity to explore the area of migration studies by taking courses with a broad perspective on the prevailing theory and practice. Particular emphasis is put on practical fieldwork.

The Migration Studies specialisation trains students for the international labour market as policy advisors, practitioners, researchers, etc., working for governments, international organisations or academic institutions.

Governance of Innovation

The rapid diffusion of new technologies such as nanotechnology, artificial intelligence and robotics, biotechnologies, renewable energy, and blockchain is confronting society with new social, economic and political challenges.

These new technologies interact in many complex ways with different parts of our society, polity, and economic and technological system. This demands a systemic approach not only in understanding these phenomena but also in operating in the world of these new technologies, either as an academic, a policymaker or stakeholder in an organisation such as an NGO.

The governance of technology at all levels - governments, firms, NGOs, and private individuals - will be a new challenge. This specialisation provides students with the tools needed to meet that challenge. Students will learn how to understand the impact of these new technologies and to maximise their social and economic benefits while minimising their social costs.

Students will develop an in-depth understanding of the economic fundamentals of innovation and of the policy instruments used to foster innovation, but also of the appropriate policy responses to new technologies and the social impact new technologies have as they diffuse more broadly through society. They will acquire the practical skills needed to operate in this new knowledge economy.

Students will benefit from the UNU-MERIT networks of well-recognised policymakers and staff from international organisations such as the World Bank, the European Commission, the Organisation for Economic Cooperation and Development, and the World Intellectual Property Organization, as well as policymakers from many countries around the world. Courses will host speakers from these organisations and include field trips.

Regional Integration and Multi-Level Governance

In today’s world, public policymaking is no longer a prerogative of the State. Competences to introduce, reform and implement public policies become increasingly shared, rather than divided, between various governmental and non-governmental actors across the subnational, national, transnational, international and supranational levels. Countries jointly pursue the accomplishment of Sustainable Development Goals (SDGs) and solutions to common policy challenges. Complex systems of multi-level governance, in which actors at different levels of authority collaborate and compete for control over public policymaking, have developed across the globe.

This specialisation explores how regionalism and multi-level governance transform how public policy is designed and executed in different world regions: Europe, Asia, Africa, South and North America. The four courses of the specialisation investigate challenges to governance in complex environments and analytical approaches used to address them. Students learn how and why micro- and macro-regions emerge and proliferate and which kinds of regionalism exist in different parts of the world. They systematically study key theories explaining regionalism and multi-level governance and methodologies for analysing cross-regional policies and regional institutions. Governance in multi-level settings is analysed as regards the effectiveness and efficiency of policy coordination as well as its democratic quality.

Current practices of regional governance and regional solutions for the implementation of the SDGs are investigated both from an academic and practical perspective.

</table>
Risk and Vulnerability

Disasters disrupt national economies affecting people, communities and countries substantially today and even more tomorrow. With the Sustainable Development Goal 13, the international community has called to strengthen resilience and adaptive capacity to climate-related hazards and natural disasters in all countries. Besides natural hazards, human-made disasters such as cyber-attacks or terrorism and the perceived risk thereof have entered the daily lives of many with far-reaching social impacts.

In response to these risks, stakeholders worldwide are keen on finding optimal innovative instruments that can aid vulnerability assessment (and scenario modelling) in efforts to institute effective early warning systems, build resilience and promote adaptive governance temporally and spatially.

This specialisation deals with the key geospatial, governance, and social aspects in disaster risk assessment, resilience building, crisis management, and the role of risk perceptions therein. Students are exposed to diverse vulnerability and resilience dimensions, components, databases, assessment frameworks and analytical techniques. They learn how to select relevant indicators and construct composite indices independently. At the end of the specialisation, students moreover discover how to cost-efficiently and effectively deal with, communicate and manage crisis situations (e.g. through risk financing). Diverse quantitative and qualitative techniques and instruments are employed throughout the specialisation, including several geo-information platforms for visualising, analysing and interpreting spatial data (QGIS).

The specialisation is taught in collaboration with the United Nations University Institute for Environment and Human Security (UNU-EHS) in Bonn, Germany. In addition, students benefit from first-hand practical sessions with visiting disaster-risk experts and practitioners working for governments, financial institutions, private companies, civil society and research institutes nationally and internationally.

Foreign Policy and Development

An essential part of policy is influenced by or made at the international stage, between states as sovereign actors. This specialisation focuses on the key policy areas negotiated in the international arena, from the flows of trade in goods and services, and intellectual property rights to development cooperation and the promotion and protection of human rights.

We assess the goals of economic development, the influence of international mediation and negotiation, and the role of legal rules in facilitating or hindering that process. We examine the current international legal development regime; study the underlying social and economic factors that contribute to the failure of efforts at legal reform; analyse the reform strategies of selected development agencies; and explore alternative modes of analysis that may lead to more effective strategies than many legal assistance programmes have enjoyed to date.

In doing so, we also aim to provide students with key tools to participate in such processes at the international level. This specialisation features dedicated training sessions in negotiation skills and the gathering of (open source) intelligence and opens ways to practising these skills in simulated negotiations and a mock trial. The specialisation is also scheduled around extra-curricular activities that allow students to practise these skills outside of the classroom, for example, by participating in EuroMUN, a large Model United Nations conference held in Maastricht every year.

Social Entrepreneurship and Public Policy

Increasingly, bottom-up social entrepreneurship initiatives by citizen, corporate and government leaders are generating viable and innovative solutions to present-day economic and social problems. Social entrepreneurs and social enterprises are also being called to partner with the State and firms to trigger a social transformation in their communities and thereby contribute to sustainable development. Thus, social entrepreneurship offers unique opportunities to meld social values with professional work. No wonder then that the study of social entrepreneurship has emerged as a new and fast-growing field of academic, policy and career relevance.

Likewise, students taking this track will discover how social entrepreneurship can be leveraged to tackle contemporary challenges at local, national and global levels. They will learn the intricacies of making business plans, evaluating the impact of new technologies, preparing advocacy reports to influence policy, designing systemic solutions and communicating the value of social initiatives to citizens, organisations and policymakers. Finally, they will get opportunities to network with practitioners and social enterprises from different parts of the world.

Over its four modules, students will uncover social entrepreneurial processes to tackle diverse global challenges and gain exposure to transdisciplinary approaches drawing upon social sciences, business studies, environmental studies and behavioural sciences. They will also acquire practical skills through projects involving hands-on creation of business models, advocacy reports, policy briefs and even a social innovation.

In sum, this track is for students, who want to learn how to become impactful change-makers, especially in boundary organisations interacting with government, firms and NGOs.

“The MPP helped me to strengthen my interpersonal communication skills by understanding the position and perspectives of my international classmates. I find it fascinating how an international environment can bring so much to a debate. The intensity of the programme prepared me to deal with real-life professional challenges such as tight submissions and group work dynamics.”

Gisela Garrido Veron, Public Policy & Urban Development Specialist | Research Assistant at Institute of Housing and Urban Development Studies, Erasmus University Rotterdam, the Netherlands, MPP 2016

Career Support

The programme’s year-long Employability Track, designed and offered in collaboration with the career advice and coaching organisation Key2Advance, helps students to develop their personal, academic and professional plan, through workshops, individual Career Sessions and mentoring sessions. The track includes announcements of internships opportunities and is rewarded with a certificate.

UNU-MERIT co-sponsors and provides free access to MPP students to the annual Careers Beyond Borders week hosted by the United Nations Student Association.

Maastricht University’s Career Services office provides personal training and workshops to MPP students free of charge or for a low fee.

Finally, MPP students who are already working for an organisation in the public sector may receive assistance from their employer through a sabbatical or financial support. We are happy to help out with such arrangements.
Practical information

Application and Admissions

The Board of Admission reviews each application. Admission requirements are identical for all specialisations of the programme.

Admission requirements

• A bachelor’s or master’s degree from a relevant academic field such as economics, international relations, political science, law, social sciences, business administration, health sciences or public health
• Adequate knowledge of pre-calculus mathematics and ideally descriptive statistics
• Basic knowledge of economics, social sciences, political science and/or law
• Proficiency in English: for a TOEFL test, we require a minimum score of 600 (PBT) or 100 (IBT) and 240 (CBT). For an IELTS test, we require a minimum score of 7.0. Results of tests taken more than three years before the date of your application will not be considered. For a Cambridge English test: Advanced certificate, we require Grade A. For a Cambridge English test: Proficiency certificate, we require Grade A, B or C.

How to apply?

If you meet the admission requirements, please complete a registration request for the programme via www.studielink.nl. You will receive confirmation of your request and login details for www.maastrichtuniversity.nl > My UM. Please complete the application and upload all required documents in the My UM portal. If we need further information to assess or complete your application, additional documents may be requested.

Upon receipt of your application request, your application will be reviewed. Within four to six weeks you will hear whether you are admissible to the programme.
Tuition Fees

Maastricht University has a lower and a higher tuition fee. The tuition rate depends on several factors, such as nationality, residence and whether this is your first or second study programme. For the most up-to-date information and to find out which rate applies to you, please use our online tuition fees guide: www.maastrichtuniversity.nl/tuitionfeesguide

Tuition rates for the academic year 2020/2021*:

**Lower tuition fee**
Full-time bachelor’s and master’s students: € 2,143*

**Higher tuition fee**
Full-time master’s students: € 13,800*

* No rights may be derived from the fees published in this brochure.

Scholarships

There are various scholarship opportunities for the master’s programmes, e.g. Maastricht University High Potential Scholarship Programme, Nuffic, World Bank, etc.

For more specific information on the application process and eligibility criteria, please visit the scholarship section of the Maastricht University website or contact the Scholarship Office at scholarships@maastrichtuniversity.nl

- students who do not need a visa: 15 July

Please visit the webpage: www.maastrichtuniversity.nl/governance for the latest information.

Questions about the application process?

For any questions about the application process, please contact us at info-governance@maastrichtuniversity.nl

Programme details and tuition fees may change. Please check the Maastricht University website for the latest information.
Other Programmes

Besides the master’s programme in Public Policy and Human Development, UNU-MERIT offers the following programmes:

- a full-time PhD Programme on Innovation, Economics and Governance for Development (IEGD)
- a dual career training programme to obtain a PhD in Governance and Policy Analysis (GPAC²)
- a course on Evidence-Based Policy Research Methods (EPRM)
- a course on Design and Evaluation of Innovation Policies (DEIP)
- a Migration Management Diploma Programme (MMDP)

Student Organisations

There are several study and student associations in Maastricht, many of which are internationally oriented to facilitate contacts between Dutch and foreign students.

The MPP study organisation DEMOS was set up by a group of enthusiastic students who were eager to organise extra-curricular social and academic activities for students and researchers. For more information about DEMOS, please visit: https://www.facebook.com/MPPDEMOS/

The United Nations Student Association (UNSA) is a student organisation run by students from various faculties. For more information about UNSA, please visit: http://www.myunsa.org

PREMIUM Programme

Maastricht University’s PREMIUM programme is an excellence programme for outstanding master’s students. PREMIUM offers participants the opportunity to gain hands-on experience by solving a practical challenge for a client. Each project involves a small team of about five students, assisted by a content mentor and a competence coach. PREMIUM serves as additional preparation for your career. Since 2018, more than a dozen MPP students have completed the programme successfully.
