Evidence-Based Policy Research Methods (EPRM)

The Evidence-Based Policy Research Methods (EPRM) course equips participants with the fundamental tools to design evidence-based research projects and analyse data.

The 14-week customised EPRM programme fills the gap between a master’s degree and the start of a research project, either work-related or for a PhD thesis. It is suitable for researchers from academic institutions or policy makers in developing or developed countries seeking to strengthen their research competencies and outputs.

Reasons to join
- Learn to design a proposal for evidence-based research
- Learn to analyse qualitative or quantitative data
- Improve your academic writing
- Learn tools to disseminate research
